

PrintManager 2000 Data Management System

Seamless System Integration of Coding and Data Management Systems to Optimize Uptime Performance

The PrintManager 2000™ data management system is latest generation of production imaging and data management software from Videojet. PrintManager 2000 software is an interactive production control and information management software tool. It's designed to control and format information for production line coding, marking, labeling, and scanning systems. Based on the industry standard Windows® NT/2000 operating system, PrintManager 2000 software has a flexible driver-based architecture, allowing it to interface with a variety of production line devices.

Control Multiple Production Line Equipment

PrintManager 2000 software allows for system integration across multiple production lines, facilities or sites and up to 256 devices using Ethernet and RS232 communications. Both graphical or text-based terminals are supported to provide message activation capabilities from each production line or a centralized location on the plant floor. In addition, PrintManager 2000 software manages input from hand held or stationary scanners, in motion scales, PLCs, and other computers and peripherals. **Reduce operator time and labor costs with automated production commands**

Automatically Generate Custom and Standard Reports

PrintManager 2000 software provides a graphical user interface familiar to Windows® users and compatible with unique characteristics of production imaging. An easy to use area control panel provides a point and click start of batch processing at any location on the plant floor. The production manager or system administrator can configure various production reports that are automatically generated and printed. These reports can be accessed by accounting, inventory control, or management through the network server. **Save time with production reports on demand**

Database Creation and Organization for Central Information Access

Linked to existing plant business systems, PrintManager 2000 software provides the capability to interface with customer data for the purpose of building and maintaining a message database for a variety of Videojet products, as well as most table-top or print and apply labeling systems. The database provides a central point of information for access and control, as well as consistent information across the plant network. Archived data also becomes easier to log, retrieve and control. **Eliminate information lag-time and optimize data management**

Network Connectivity for Access Anytime, Anywhere

PrintManager 2000 software supports LAN/WAN and exchange access, including TCP/IP and NFS. A network connection to the business server allows a manager or administrator to access reports, monitor production, and view diagnostic information. In addition, multi-level personal password codes assure security and accurate data management. **Reduce system support and administrative labor costs**

On-line Self Diagnostics for Real-Time Monitoring of All Connected Devices

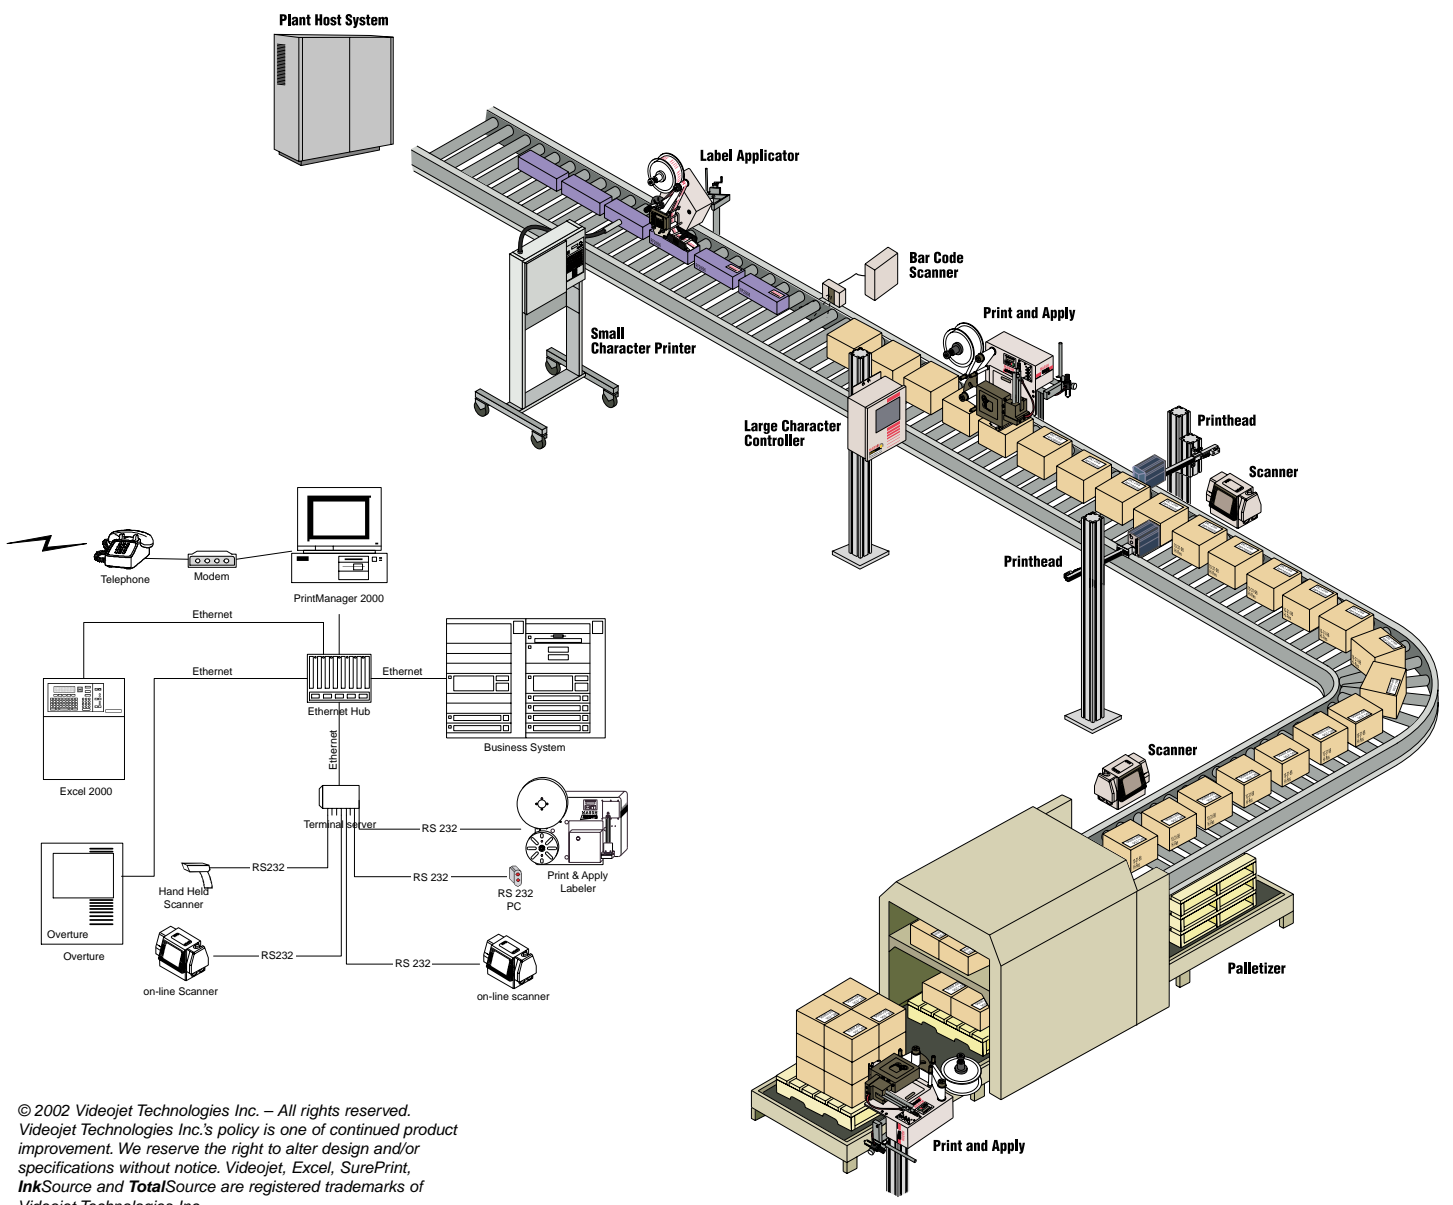

The system diagnostic features in the PrintManager 2000 software allow for remote technical consultation, as well as automatic message notification to plant operators. PrintManager 2000 software is configured to trigger an alarm system when an error occurs at the ink jet printer. The PrintManager 2000 software operating over a plant network will identify equipment maintenance needs or operating concerns before they become disabling. **Reduce maintenance costs and downtime**

Videojet TotalSource® Service

The TotalSource system is the finest and most complete technical support program in the business. It includes everything from expert applications assistance, operator training and a full spectrum of maintenance services. The TotalSource program ensures total customer satisfaction. **Support when you need it**
